## Testing web applications for managing Internet access, hosting and e-mail provider business

The system in development provided the means to manage the offer of communication products and services, such as wireless Internet access, the necessary hardware, etc.

### The Challenge

Design Test Cases with poor specifications and no GUI available.

The product was still in-development.

Ensuring good communication with all teams, located on three different time zones

Learning some accounting details specific to the US and several European countries

Technology:

TestLink – test case and requirement management;

Bugzilla Test Runner - test case and requirement management;

Bugzilla – defect tracking;

Putty – script running;

MySQL Administrator – DB access

Dates: May 20010 December 2010

Advantage

- Full Quality Assurance offshore services- manual and automated testing;
- Significant cost reduction by using Codea QA engineers
